## ABSTRACT

A fabrication method of an oral care composition comprising the steps of drying a Cimicifuga root, soaking the dried Cimicifuga root in a vinegar for a

5 predetermined time period, and drying the vinegar-soaked Cimicifuga root. The vinegar-soaked then dried Cimicifuga root, a salt and a water are admixed at a sequential weight ratio of about 10% to 40%, about 10% to 40% and about 30% to 50%. The admixture of the Cimicifuga root, the salt and the water are evaporated to obtain a Cimicifuga-salt concentration and then Cimicifuga root fibers are removed from the Cimicifuga-salt concentration.
